

1988 □ 9

Supply of coal to public power stations and all coking plants in 1987

The role of the electricity industry as a major coal consumer was once more confirmed during 1987 with the delivery of 186.3 mio t of hard coal to public power stations, i.e. 59,0% of total coal production. Of this figure 77.2% was of Community origin.

Despite a decrease in supplies to public power stations of around 1 m tonnes (-0.5%) Community consumption grew in 1987 by 10.8 million tonnes (+ 6%) compared to 1986 due to a large reduction in stocks. This increase which concerns most countries with the exception of France was largely caused by the inclusion for statistical purposes of Spanish hard lignite, making a difference of 4.4 mio t. The overall decrease in supplies, however, conceals contrasting developments in the different Member States. Whereas the Netherlands, Italy, Ireland, Portugal and Belgium increased their coal purchases, the remaining countries, in particular the United Kingdom, covered their increased consumption for electricity generation by greater use of coal reserves. Of an overall decrease in reserves in the Community of 4.8 mio t, 2.3 mio t is attributable to the United Kingdom alone. Coal imported from third countries (40.6 mio t compared to 42.1 mio t the previous year) came mainly from Australia, with 10.3 mio t (+15.1%), South Africa with 8.9 mio t, (-32.9%) and the USA with 9,5 mio t (-16.5%).

Supplies of coal to coking plants totalled 71.4 mio t in 1987, i.e. 6 mio t (-7.7%) less than the previous year. Of this amount, 30.9 mio t (43.2%) was met by imports from non-Community countries, which increased by 2% compared to 1986. The proportion of Community coal fell from 42.7 mio t (55.2%) the previous year to 36.4 mio t (50.9%) in 1987. Supplies fell by 3.4 mio t (-11,5%) in the Federal Republic of Germany, which does not import coking coal, by 1.4 mio t (-5,4%) in France, by 0.5 mio t (-5.4%) in Italy and by 0.3 mio t (-2.8%) in the United Kingdom.

The leading suppliers of imported coke were the USA with 17.6 mio t (17.9 mio t in 1986) followed by Australia with 9.1 mio t (8.1 mio t in 1986) and Canada with 2.6 mio t (compared to 2.8 mio t the previous year).
